Abstract (Basic): EP 576226 A

The image scanner-reader includes an image read unit (1, 2, 3) and an employing control unit (11, 12, 13, 14). The image read unit is used to read an original document (10). When an original document reading operation is suspended, the restart of the reading operation is controlled after decreasing the relative moving speed to a slow reading speed of the original document (10).

When the image data buffer (9) becomes full enough to cause a suspension state, and the read operation is restarted after changing control conditions, so that the quantity of data transferred to the image data buffer (9) is reduced.

ADVANTAGE - Reduces number of restart operations and improves overall read speed without increasing data receiving speed of host device. Reduces processing time when series of instructions are given for same data.

Dwg.3/19
